

A Division of One Capital Management, LLC

**FundX Flexible ETF – XFLX (the "Fund")**

---

**Supplement dated July 26, 2024 to the  
Summary Prospectus  
dated January 31, 2024**

---

This supplement is being filed to inform shareholders that, effective June 30, 2024, Mr. Martin DeVault no longer serves as a Portfolio Manager to the Fund. Accordingly, all references to Mr. DeVault are hereby removed in their entirety in the Fund's Summary Prospectus.

In addition, effective June 30, 2024, Mr. Mark Dea was added as a Portfolio Manager to the Fund.

*The list of Portfolio Managers for the Fund under the heading "Portfolio Managers" on page 7 of the Summary Prospectus is hereby revised as follows:*

**Portfolio Managers**

<b>Name</b>	<b>Title</b>	<b>Managed the Flexible ETF Since</b>
Janet Brown	Portfolio Manager	July 2002 (the Fund's inception)
Mark Dea	Portfolio Manager	June 2024
Sean McKeon	Portfolio Manager	July 2002 (the Fund's inception)

Please contact the Fund at 1-866-455-FUND [3863] or your financial advisor if you have questions or need assistance. These documents are available upon request and without charge by calling the Fund at 1-866-455-FUND [3863].

**Please retain this Supplement with the Summary Prospectus.**

# Summary Prospectus

## FundX Flexible ETF (XFLX)

January 31, 2024

Before you invest, you may want to review the FundX Flexible ETF (the "Fund" or the "Flexible ETF") prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus, Statement of Additional Information and other information about the Fund online at [www.fundxfunds.com](http://www.fundxfunds.com). You may also obtain this information at no cost by calling 1-866-455-FUND [3863] or by sending an e-mail to [issue@fundx.com](mailto:issue@fundx.com). The Fund's Prospectus and Statement of Additional Information, both dated January 31, 2024, are incorporated by reference into this Summary Prospectus.

### Investment Objective

The Fund seeks to generate total return, which is capital appreciation plus current income.

### Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Flexible ETF. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

#### FundX Flexible ETF

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.70%
Other Expenses <sup>(1)</sup>	None
Acquired Fund (Underlying ETF) Fees and Expenses <sup>(2)</sup>	0.47%
<b>Total Annual Fund Operating Expenses</b>	<b>1.17%</b>

<sup>(1)</sup> Estimated for current fiscal year.

<sup>(2)</sup> The Total Annual Fund Operating Expenses for the Fund do not correlate to the Ratio of Expenses to Average Net Assets provided in the Financial Highlights section of the statutory prospectus, which reflects the operating expenses of the Fund and does not include Acquired Fund Fees and Expenses.

### Example

This Example is intended to help you compare the cost of investing in the Flexible ETF with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Flexible ETF for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Flexible ETF's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	1 Year	3 Years	5 Years	10 Years
<b>FundX Flexible ETF</b>	\$119	\$372	\$644	\$1,420

## **Portfolio Turnover**

The Flexible ETF may pay transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). If transaction costs are involved, a higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Flexible ETF shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Flexible ETF’s performance. During the most recent fiscal year, the portfolio turnover rate of the FundX Flexible Income Fund (the “Predecessor Fund”), a mutual fund series of FundX Investment Trust (the “Trust”) that was reorganized into the Flexible ETF was 209% of the average value of its portfolio.

## **Principal Investment Strategies**

The Flexible ETF is an ETF-of-ETFs and as such invests primarily in other ETFs (“Underlying ETFs”). The Underlying ETFs, in turn, invest primarily in individual securities such as common stocks and corporate or government bonds.

Because markets change, the Advisor actively manages the Flexible ETF’s portfolio using a proprietary investment strategy called Upgrading, which seeks to capture global market trends. The Advisor invests in the Underlying ETFs that it considers to be in sync with current market leadership. The Advisor sells an Underlying ETF when it believes that the Underlying ETF is no longer performing in sync with current market leadership or if a new Underlying ETF is judged more attractive than a current holding.

The Advisor classifies the pool of Underlying ETFs into five risk/return categories, listed here from what it perceives to have the highest to lowest risk:

- Sector Equity (including single-country Emerging Markets) Underlying ETFs
- Aggressive Equity Underlying ETFs
- Core Equity Underlying ETFs
- Total Return Underlying ETFs
- Bond Underlying ETFs

Under normal market conditions, the Flexible ETF will invest predominately in Bond Underlying ETFs of varying maturity, credit quality (including high-yield securities, or “junk bonds”) and regional exposure. The Flexible ETF attempts to take advantage of bond market leadership trends by targeting those areas of the bond market that are excelling in the current market environment. The Flexible ETF aims to control downside risk by limiting exposure to more volatile areas of the bond market. The Flexible ETF may purchase, without limit, shares of Underlying ETFs that invest in domestic and international corporate or government bonds.

To a lesser extent the Flexible ETF may also invest a portion of its assets in Total Return Underlying ETFs, which may employ a wide variety of investment strategies, including blending equity securities with fixed income instruments, and techniques designed to provide steady returns with dampened volatility, such as market neutral, long/short, and arbitrage strategies. Because Total Return Underlying ETFs are not fully invested in bonds, these funds typically have less credit and interest rate risk. The Flexible ETF may engage in securities lending activities to increase its income.

See “More about the Funds’ Investment Objectives, Strategies and Risks – The Advisor’s Process for Classifying the Underlying ETFs” for more information on this system.

## Principal Risks

An investment in the Flexible ETF entails risk. The Flexible ETF cannot guarantee that it will meet its investment objective. Since the price of the Underlying ETFs that the Flexible ETF holds may fluctuate, the value of your investment may fluctuate and you could lose all or a portion of your investment in the Flexible ETF. The following risks could affect the value of your investment:

- **ETF Risk** - The Flexible ETF is an ETF and, as a result of an ETF's structure, it is exposed to the following risks:
  - **Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.** The Flexible ETF has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
  - **Cash Redemption Risk.** The Flexible ETF's investment strategy may require it to redeem shares for cash or to otherwise include cash as part of its redemption proceeds. The Flexible ETF may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Flexible ETF to realize a capital gain that it might not have realized if it had made a redemption in-kind. As a result, the Flexible ETF may pay out higher annual capital gain distributions than if the in-kind redemption process was used. To the extent that the transaction fees charged for redemptions of creation units is insufficient to cover the Flexible ETF's transaction costs of selling portfolio securities, the Flexible ETF's performance could be negatively impacted.
  - **Costs of Buying or Selling Shares.** Due to the costs of buying or selling shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of shares may significantly reduce investment results and an investment in shares may not be advisable for investors who anticipate regularly making small investments.
  - **Shares May Trade at Prices Other Than NAV.** As with all ETFs, shares may be bought and sold in the secondary market at market prices. As a result, investors in the Flexible ETF may pay significantly more or receive significantly less for shares than the Flexible ETF's NAV. Although it is expected that the market price of shares will approximate the Flexible ETF's NAV, there may be times when the market price of shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for shares in the secondary market, in which case such premiums or discounts may be significant.
  - **Trading.** Although shares are listed for trading on the NYSE Arca, Inc. (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of shares may begin to mirror the liquidity of the Flexible ETF's underlying portfolio holdings, which can be significantly less liquid than shares. This could lead to the Flexible ETF's shares trading at a price that is higher or lower than the Flexible ETF's NAV.

- **General Market Risk** – General market risk is the risk that the value of a Flexible ETF's shares will fluctuate based on the performance of the securities held by the Underlying ETFs it owns. These fluctuations may cause a security to be worth less than its cost when originally purchased or less than it was worth at an earlier time.
- **Management Risk** – Management risk describes the Flexible ETF's ability to meet its investment objective based on the Advisor's success or failure to implement investment strategies for the Flexible ETF.
- **Foreign Securities Risk** – The Underlying ETFs held by the Flexible ETF may have significant investments in foreign securities. Foreign securities risk entails risk relating to political, social and economic developments abroad and differences between U.S. and foreign regulatory requirements and market practices.
- **Leverage Risk** – Some Underlying ETFs may borrow money for leveraging and will incur interest expense. Leverage is investment exposure which exceeds the initial amount invested. Leverage can cause the portfolio to lose more than the principal amount invested. Leverage can magnify the portfolio's gains and losses and therefore increase its volatility. The ETF does not invest in Underlying ETFs that utilize leverage as part of their investment strategies.
- **Interest Rate and Credit Risk** – Interest rates may rise resulting in a decrease in the value of the securities held by the Underlying ETFs or may fall resulting in an increase in the value of such securities. There is the possibility of heightened volatility, reduced liquidity and valuation difficulties that may impact fixed income markets.
- **High-Yield Securities (Junk Bond) Risk** – The value of fixed-income securities held by the Underlying ETFs that are rated below investment grade are subject to additional risk factors such as increased possibility of default, illiquidity of the security and changes in value based on public perception of the issuer. High-Yield Securities are speculative and issuers of high yield securities may have reduced capacity to repay interest and principal.
- **ETF Trading Risk** – Because the Flexible ETF invests in ETFs, it is subject to additional risks that do not apply to conventional funds, including the risks that the market price of an ETF's shares may trade at a discount to its net asset value ("NAV"), an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which the ETFs trade, which may impact a fund's ability to sell its shares of an ETF.
- **Portfolio Turnover Risk** – To the extent the Flexible ETF invests in ETFs, it may be subject to the risks of having a high portfolio turnover rate. High portfolio turnover involves correspondingly greater expenses to a fund, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestments in other securities.
- **Upgrading Strategy Risk** – The Flexible ETF employs an Upgrading strategy whereby it continually seeks to invest in the top-performing securities at a given time. When investment decisions are based on near-term performance, however, the Flexible ETF may be exposed to the risk of buying Underlying ETFs immediately following a sudden, brief surge in performance that may be followed by a subsequent drop in market value.
- **Underlying ETFs Risk** – The risks associated with the Flexible ETF include the risks related to each Underlying ETF in which the Flexible ETF invests. Although the Flexible ETF seeks to reduce the risk of your investment by diversifying among ETFs that invest in bonds and, in some cases, stocks, there are inherent risks of investing in various asset classes. The Flexible ETF must also pay its pro rata portion of an investment company's fees and expenses.

- **Securities Lending Risk** - There are certain risks associated with securities lending, including the risk that the borrower may fail to return the securities on a timely basis or even the loss of rights in the collateral deposited by the borrower, if the borrower should fail financially. As a result, the Flexible ETF may lose money.
- **Market Events Risk** - Local, regional, or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the market generally and on specific securities. Periods of market volatility may occur in response to pandemics or other events outside of our control. These types of events could adversely affect the Flexible ETF's performance. Economies and financial markets throughout the world are increasingly interconnected. Economic, financial or political events, trading and tariff arrangements, public health events, terrorism, technology and data interruptions, natural disasters, and other circumstances in one or more countries or regions could be highly disruptive to, and have profound impacts on, global economies or markets. As a result, whether or not a fund invests in securities of issuers located in or has significant exposure to the countries directly affected, the value and liquidity of a fund's investments may go down. Securities markets may also be susceptible to market manipulation or other fraudulent trade practices, which could disrupt the orderly functioning of these markets or adversely affect the value of securities traded in these markets, including a fund's securities.

## Performance

The following performance information provides some indication of the risks of investing in the Flexible ETF. The Flexible ETF is the successor to the FundX Flexible Income Fund (the "Predecessor Fund"), as a result of the reorganization of the Predecessor Fund into the Flexible ETF on October 9, 2023, (the "Reorganization"). Prior to the Reorganization, the Flexible ETF had not yet commenced operations.

As of the Reorganization, the Flexible ETF has adopted the performance history of the Predecessor Fund, which operated as an open-end mutual fund. The Predecessor Fund was also advised by the Advisor and had the same investment objective and substantially similar strategies as the Flexible ETF. The bar chart shows the Predecessor Fund's performance for the calendar years ended December 31. The table illustrates how the Predecessor Fund's average annual returns for 1-year, 5-year and 10-year periods compare with those of a broad measure of market performance. The Predecessor Fund's past performance, before and after taxes, does not necessarily indicate how the Flexible ETF will perform in the future. Updated performance is available on the Flexible ETF's website [www.fundxfunds.com](http://www.fundxfunds.com).

Effective at the close of business on August 1, 2014, the FundX Flexible Income Fund, a series of Professionally Managed Portfolios (the "Previous Predecessor Fund", together with the Predecessor Fund, the "Predecessor Funds"), reorganized into the Predecessor Fund, a series of FundX Investment Trust. Performance information shown prior to the close of business on August 1, 2014 is that of the Previous Predecessor Fund. Additionally, the Predecessor Fund has adopted the Financial Statements of the Previous Predecessor Fund.

## FundX Flexible ETF - XFLX

### Calendar Year Total Return as of December 31

#### Best and Worst Quarters for the Predecessor Funds

Best Quarter	12/31/2020	4.72%
Worst Quarter	3/31/2020	-6.38%

#### Average Annual Total Returns as of December 31, 2023 for the Predecessor Fund

	1 Year	5 Years	10 Years
<b>FundX Flexible ETF - XFLX</b>			
Return Before Taxes	3.73%	1.23%	1.66%
Return After Taxes on Distributions	0.28%	-0.34%	0.05%
Return After Taxes on Distributions and Sale of Fund Shares	2.26%	0.32%	0.64%
Bloomberg US Aggregate Bond Index (reflects no deduction for fees, expenses or taxes)	5.53%	1.10%	1.81%
ICE BofA US 3-Month US Treasury Bill Index	5.01%	1.88%	1.25%

The “Return After Taxes on Distributions” shows the effect of taxable distributions (dividends and capital gains distributions), but assumes that you still hold Flexible ETF shares at the end of the period. The “Return After Taxes on Distributions and Sale of Fund Shares” shows the effect of both taxable distributions and any taxable gain or loss that would be realized if a fund’s shares were sold at the end of the specified period. The after-tax returns are calculated using the highest individual federal marginal income tax rates in effect and do not reflect the impact of state and local taxes. Your actual after tax returns depend on your tax situation and may differ from those shown. The after tax returns are not relevant if you hold your Flexible ETF shares through a tax deferred account, such as a 401(k) plan or an individual retirement account (“IRA”). In certain cases, the “Return After Taxes on Distributions and Sale of Fund Shares” may be higher than the other return figures for the same period. This will occur when a capital loss is realized upon the sale of Flexible ETF shares and provides an assumed tax benefit that increases the return.

In certain cases, Return After Taxes on Distribution and Sale of Fund Shares may be higher than the other return figures for the same period. This will occur when a capital loss is realized upon the sale of Fund shares or provides an assumed tax benefit that increases the return. Your actual after-tax returns depend on your tax situation and may differ from these shown.

## Investment Advisor

One Capital Management, LLC is the investment advisor to the Flexible ETF.

## Portfolio Managers

Name	Title	Managed the Fund Since
Janet Brown	Portfolio Manager	July 2002 (the Fund's inception)
Martin DeVault	Portfolio Manager	July 2002 (the Fund's inception)
Sean McKeon	Portfolio Manager	July 2002 (the Fund's inception)

## Purchase and Sale of Flexible ETF Shares

Individual shares may only be purchased and sold on a national securities exchange through a broker-dealer. You can purchase and sell individual shares of the Flexible ETF throughout the trading day like any publicly traded security. The Flexible ETF's shares are listed on the Exchange. The price of the Flexible ETF's shares is based on market price and, because exchange-traded fund shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount). The Flexible ETF issues and redeems shares on a continuous basis, at NAV, only in blocks of shares called Creation Units, principally in-kind, and only Authorized Participants (typically, broker-dealers) may purchase or redeem Creation Units. When buying or selling the Flexible ETF's shares on the Exchange, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Flexible ETF (bid) and the lowest price a seller is willing to accept for shares of the Flexible ETF (ask) (the "bid-ask spread"). Recent information regarding the Flexible ETF's NAV, market price, premiums and discounts, and bid-ask spreads will be available at [www.fundxfunds.com](http://www.fundxfunds.com).

## Tax Information

The FundX Flexible ETF's distributions are taxed as ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or an individual retirement account. Tax-deferred arrangements may be taxed later upon withdrawal of monies from those accounts.

## Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Flexible ETF through a broker-dealer or other financial intermediary (such as a bank), the Flexible ETF may pay for account servicing and the Advisor may pay the intermediary for the sale of Flexible ETF shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Flexible ETF over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
